Basic information about an academic essay

- at the centre of an academic essay, there has to be a clearly developed and specific rather than general research question that needs to be individually developed;
- this question should be a focused and specific question, not a general one;
- it is important that you develop a line of thinking;
- in contrast to a report, the focus lies not on completeness and detailed knowledge than on developing a (personal) line of arguments;

- your own argumentation is important; you have to explain the essential aspects of the chosen topic; this does not mean that an essay can be conceived and written without 'content' and 'without context';
- the larger research context of your topic needs to become clear.

Structure of an academic essay (proposal)

1 Introduction

- please present the topic of the essay; explain your chosen question and the relevance of this question;
- give an overview of the current state of research;
- please explain your own position (following an opinion or rejecting an opinion).

2 Main Part (subdivided into several chapters) ["Main Part" should NOT be your title – use meaningful headings!]

- presentation, discussion and evaluation of the selected position on the topic;
- the focus should be on the logical discussion of one's own position/opinion, which is illustrated with the arguments of previous scholars in the field and one's own theoretical arguments (and possibly with empirical examples).

3 Conclusion (Summary)

- summary of the central argumentation and conclusion: outlining of further positions and other discussions and consequences for research;
- Please do not point out new arguments in the "Conclusion"
